

IN THE CLAIMS:

1(currently amended): A key holder with means for enhanced locating of a person's keys comprising:

- a) key holding means for holding at least one key;
- b) a housing connected to the key holding means;
- c) a battery holder within the housing with first and second battery connections;
- d) a light source within the housing arranged to shine light out of the housing;
- e) a vibration switch within the housing;
- f) first switch means within the housing operatively connected between the battery connections and the vibration switch for causing shaking of the housing ~~key holder~~ to a preset intensity to actuate the first switch means and cause said first switch means ~~it to close remain closed~~ for a preset time interval ~~after actuation when a battery is in the housing~~; and
- g) second switch means for connecting the battery connections to the light source during the time interval, to thereby emit light from the housing for said ~~a preset time interval after the user has shaken the key holder.~~

2(currently amended): The key holder according to claim 1 in which the preset intensity is greater than that resulting from ~~usual~~ purse operation.

3(original): The key holder according to claim 2 in which the preset time interval is no greater than one minute.

4(original): The key holder according to claim 1 in which the preset time interval is no greater than one minute.

5(currently amended): A key holder with means for enhanced locating of a person's keys comprising:

- a) key holding means for holding at least one key;
- b) an illumination means connected to the key holding means, the illumination means including;
 - 1) a battery;
 - 2) a light source;
 - 3) a vibration switch; and
 - 4) circuitry operatively interconnecting the battery, the light source, and the vibration switch such that shaking the key holder with a preset intensity will illuminate the light

source for a preset time interval ~~long enough to enable the person to find the key holder~~
~~in a cluttered purse.~~

6(currently amended): The key holder according to claim 5 in which the preset intensity is greater than that resulting from ~~usual~~ purse operation.

7(original): The key holder according to claim 6 in which the preset time interval is no greater than one minute.

8(original): The key holder according to claim 5 in which the preset time interval is no greater than one minute.
